- [Practice Exam - 7: Billing, Pricing & Account Management](#)
- [Practice Exam - 8: Global Infrastructure & Migration](#)
- [Practice Exam - 9: Application Integration & Monitoring](#)
- [Practice Exam - 10: Mixed Final Review](#)
- [Full-Length Mock Exam — 65 Questions](#)

Diagnostic Quiz (Take This First)

10 quick questions covering all 4 exam domains, so you know exactly which topic-exams to prioritize before diving into the full set.

1. Under the Shared Responsibility Model, who is responsible for patching the guest OS on EC2? A) AWS B) The customer C) AWS Support D) A third party

Answer: B

2. Which service distributes incoming traffic across multiple EC2 instances?

A) Route 53 B) Elastic Load Balancing C) Direct Connect D) CloudFront **Answer: B**

3. Which storage class is cheapest for data accessed almost never, retrievable in hours? A) S3 Standard B) S3 Glacier Deep Archive C) S3 Standard-IA D) S3 Intelligent-Tiering **Answer: B**

4. Which pricing model has no long-term commitment and is billed by the hour/second? A) Reserved Instances B) On-Demand Instances C) Dedicated Hosts D) Savings Plans **Answer: B**

5. Which service is AWS's managed NoSQL database? A) RDS B) DynamoDB C) Redshift D) Aurora **Answer: B**

6. Which service detects threats like unauthorized access across your AWS account? A) Macie B) GuardDuty C) Config D) Artifact **Answer: B**

7. Which support plan includes a Technical Account Manager (TAM)? A) Basic B) Developer C) Business D) Enterprise **Answer: D**

8. Which migration strategy means moving an app to the cloud with no code changes? A) Refactor B) Rehost (lift-and-shift) C) Repurchase D) Retire **Answer: B**

9. Which service lets you set custom cost alert thresholds? A) Cost Explorer B) AWS Budgets C) Pricing Calculator D) Trusted Advisor **Answer: B**

10. Which is a core benefit of cloud computing regarding capital expense? A) Eliminates all IT cost B) Trades capital expense for variable expense C) Guarantees lower spend D) Removes need for budgeting **Answer: B**

Scoring guide

- **9-10 correct:** You're close to exam-ready — focus on [Exam 10 \(Mixed Final Review\)](#) and the [Full-Length Mock Exam](#).
- **6-8 correct:** Solid base — work through [Exams 1-9](#) by topic, focusing on any domain where you missed a question above.
- **0-5 correct:** Start with the [AWS Cloud Practitioner exam guide](#) and a foundational course first, then return to [Exams 1-9](#).

[← Back to all Practice Exams](#) -e

Practice Exam - 1: Cloud Concepts

1. Which is a key benefit of cloud computing regarding capital expense? A) Eliminates all IT costs B) Trades capital expense for variable expense C) Guarantees lower total spend D) Removes the need for budgeting

Answer: B *Explanation:* Cloud computing lets you trade upfront capital expense (data centers, hardware) for variable expense that scales with actual usage.

2. Which AWS pillar of the Well-Architected Framework focuses on the ability to recover from failures? A) Security B) Reliability C) Cost Optimization D) Performance Efficiency

Answer: B *Explanation:* Reliability covers a workload's ability to perform its function correctly and recover quickly from disruptions.

3. What does 'elasticity' mean in cloud computing? A) Fixed capacity regardless of demand B) Automatically scaling resources up or down to match demand C) Manually adding servers only D) Permanent over-provisioning

Answer: B *Explanation:* Elasticity is the ability to automatically scale compute resources up or down as demand changes.

4. Which of the following best describes 'economies of scale' in AWS pricing? A) Prices increase as more customers use AWS B) AWS passes on cost savings from large scale operations to customers C) Only enterprise customers get discounts D) Prices are fixed regardless of usage

Answer: B *Explanation:* Because AWS aggregates usage from many customers, it

can lower costs and pass savings on to all customers.

5. Which deployment model runs entirely on AWS with no on-premises component? A) Hybrid cloud B) On-premises C) All-in cloud D) Private cloud

Answer: C *Explanation:* An all-in cloud deployment runs applications entirely in the cloud, migrating existing apps or building new ones natively.

6. What is a key characteristic of 'high availability' in AWS architecture? A) Running in a single Availability Zone B) Minimizing downtime through redundancy across AZs C) Reducing costs by using one server D) Manual failover only

Answer: B *Explanation:* High availability is achieved by architecting workloads with redundancy, often distributed across multiple Availability Zones.

7. Which term describes AWS's practice of only charging for resources actually consumed? A) Reserved pricing B) Pay-as-you-go C) Fixed billing D) Flat-rate subscription

Answer: B *Explanation:* Pay-as-you-go means customers pay only for the individual services they use, for as long as they use them, with no long-term contracts.

8. What is the primary purpose of the AWS Well-Architected Tool? A) To automatically fix security issues B) To review workloads against best practices across the six pillars C) To provision new EC2 instances D) To manage IAM users

Answer: B *Explanation:* The Well-Architected Tool helps review workloads against current AWS best practices and provides improvement guidance.

9. Which advantage of cloud computing refers to deploying applications globally within minutes? A) Increased speed and agility B) Go global in minutes C) Stop guessing capacity D) Trade capital expense

Answer: B *Explanation:* AWS's global infrastructure lets you deploy applications in multiple Regions worldwide within minutes.

10. Which of the following is NOT one of the AWS Well-Architected Framework's six pillars? A) Operational Excellence B) Sustainability C) Scalability D) Cost Optimization

Answer: C *Explanation:* The six pillars are Operational Excellence, Security, Reliability, Performance Efficiency, Cost Optimization, and Sustainability — 'Scalability' is not a named pillar.

-e

Practice Exam - 2: Security & Compliance I — Shared Responsibility & IAM

1. Under the Shared Responsibility Model, who is responsible for patching

the guest operating system on EC2? A) AWS B) The customer C) AWS Support D) A third party

Answer: B *Explanation:* Customers are responsible for security 'in' the cloud, including guest OS patches, application software, and data configuration.

2. Which IAM feature groups permissions and can be attached to multiple users? A) IAM Role B) IAM Policy C) IAM Group D) IAM User

Answer: C *Explanation:* IAM Groups let you attach a set of permissions to multiple users at once for easier management.

3. What is the best practice for the AWS account root user? A) Use it for daily tasks B) Enable MFA and avoid using it for everyday tasks C) Share credentials with the whole team D) Disable MFA for convenience

Answer: B *Explanation:* AWS recommends enabling MFA on the root user and using IAM users/roles for day-to-day account access instead.

4. Which IAM entity is best suited for granting temporary access to an application running on EC2? A) IAM User with access keys B) IAM Role C) IAM Group D) Root account credentials

Answer: B *Explanation:* IAM Roles provide temporary security credentials, which are safer than long-term access keys for applications.

5. What does the principle of least privilege mean in AWS security? A) Granting full admin access to all users B) Granting only the permissions needed to perform a task C) Disabling all permissions by default D) Granting access based on seniority

Answer: B *Explanation:* Least privilege means granting only the minimum permissions necessary to perform a required task.

6. Which AWS service centrally manages access and permissions across multiple AWS accounts? A) AWS IAM B) AWS Organizations with SCPs C) Amazon Cognito D) AWS Directory Service

Answer: B *Explanation:* AWS Organizations, combined with Service Control Policies (SCPs), lets you centrally manage permissions across multiple accounts.

7. Which service manages user sign-up, sign-in, and access control for web and mobile apps? A) AWS IAM B) Amazon Cognito C) AWS Directory Service D) AWS SSO

Answer: B *Explanation:* Amazon Cognito provides authentication, authorization, and user management for web and mobile applications.

8. Which of these is considered a security best practice for IAM credentials? A) Rotate access keys regularly B) Embed credentials directly in code C) Share one IAM user among a team D) Never use MFA

Answer: A *Explanation:* Regularly rotating IAM access keys reduces the risk if credentials are ever compromised.

9. What is AWS Single Sign-On (now IAM Identity Center) primarily used for?

A) Encrypting S3 buckets B) Centralized access management across multiple AWS accounts and business applications C) Load balancing traffic D) Monitoring API calls

Answer: B *Explanation:* IAM Identity Center (formerly AWS SSO) provides centralized access management to multiple AWS accounts and SaaS applications.

10. Which AWS service is responsible for physical security of data centers under the Shared Responsibility Model? A) The customer B) AWS C) A third-party auditor D) Neither party

Answer: B *Explanation:* AWS is responsible for the security 'of' the cloud, including physical security of the data centers hosting infrastructure.

-e

Practice Exam - 3: Security & Compliance II — Data Protection & Compliance

1. Which service discovers and helps protect sensitive data such as PII stored in S3? A) Amazon GuardDuty B) Amazon Macie C) AWS Shield D) Amazon Inspector

Answer: B *Explanation:* Macie uses machine learning to automatically discover, classify, and protect sensitive data like PII.

2. Which service provides continuous threat detection across AWS accounts and workloads? A) Amazon Macie B) Amazon GuardDuty C) AWS Config D) AWS Artifact

Answer: B *Explanation:* GuardDuty continuously monitors for malicious activity and unauthorized behavior using threat intelligence and machine learning.

3. Which service filters malicious web traffic such as SQL injection and cross-site scripting? A) AWS Shield B) AWS WAF C) AWS Firewall Manager D) Amazon Inspector

Answer: B *Explanation:* AWS WAF is a web application firewall protecting against common web exploits like SQL injection and XSS.

4. Which service provides protection specifically against DDoS attacks? A) AWS WAF B) AWS Shield C) AWS Macie D) Amazon GuardDuty

Answer: B *Explanation:* AWS Shield provides managed protection against Distributed Denial of Service (DDoS) attacks.

5. Which service gives on-demand access to AWS's compliance reports and agreements (e.g., ISO, PCI)? A) AWS Artifact B) AWS Config C) AWS Audit Manager D) AWS Trusted Advisor

Answer: A *Explanation:* AWS Artifact is a self-service portal providing on-demand access to AWS's compliance documentation.

6. Which service helps continuously assess AWS usage against compliance frameworks and prepares audit reports? A) AWS Artifact B) AWS Audit Manager C) Amazon Inspector D) AWS Config

Answer: B *Explanation:* AWS Audit Manager automates evidence collection to simplify risk assessment and audit readiness.

7. Which service scans EC2 instances and container images for known software vulnerabilities? A) Amazon GuardDuty B) Amazon Inspector C) AWS Macie D) AWS Config

Answer: B *Explanation:* Amazon Inspector automatically scans workloads for software vulnerabilities and unintended network exposure.

8. Which service records configuration changes to AWS resources and evaluates them against desired rules? A) AWS CloudTrail B) AWS Config C) Amazon CloudWatch D) AWS Systems Manager

Answer: B *Explanation:* AWS Config tracks resource configuration changes over time and can check them against compliance rules.

9. Which service logs API calls made within an AWS account for governance and auditing? A) AWS Config B) AWS CloudTrail C) Amazon CloudWatch D) AWS X-Ray

Answer: B *Explanation:* CloudTrail records API activity across an account, supporting governance, compliance, and operational auditing.

10. What kind of encryption does AWS Key Management Service (KMS) primarily help manage? A) Network firewall rules B) Encryption keys for data protection C) IAM group permissions D) DNS records

Answer: B *Explanation:* AWS KMS lets you create and control encryption keys used to protect data across AWS services.

-e

Practice Exam - 4: Compute Services

1. Which service lets you run virtual servers with full control over the OS? A) AWS Lambda B) Amazon EC2 C) Amazon Lightsail D) AWS Fargate

Answer: B *Explanation:* Amazon EC2 provides resizable virtual servers (instances) where you manage the OS and installed software.

2. Which service runs code in response to events without provisioning or managing servers? A) Amazon EC2 B) AWS Lambda C) Amazon Lightsail D) Amazon ECS on EC2

Answer: B *Explanation:* AWS Lambda executes code in response to triggers/events and you pay only for compute time consumed.

3. Which service offers simplified virtual private servers with pre-configured bundles, good for simple websites? A) Amazon EC2 B) Amazon Lightsail C) AWS

Batch D) Amazon ECS

Answer: B *Explanation:* Lightsail provides easy-to-launch virtual servers with bundled compute, storage, and networking for simple applications.

4. Which container orchestration service is AWS-native (not Kubernetes-based)? A) Amazon EKS B) Amazon ECS C) AWS Batch D) AWS Outposts

Answer: B *Explanation:* Amazon ECS is AWS's own container orchestration service, distinct from the Kubernetes-based EKS.

5. Which service provides a managed Kubernetes control plane? A) Amazon ECS B) Amazon EKS C) AWS Fargate D) AWS App Runner

Answer: B *Explanation:* Amazon EKS runs Kubernetes control plane management for you, so you don't have to install/operate it yourself.

6. Which serverless compute engine works with both ECS and EKS to remove server management? A) AWS Fargate B) Amazon Lightsail C) AWS Batch D) Amazon EC2

Answer: A *Explanation:* AWS Fargate is a serverless compute engine for containers, usable with both ECS and EKS.

7. Which service automatically adjusts EC2 capacity up or down based on demand? A) Elastic Load Balancing B) Auto Scaling C) Amazon CloudWatch D) AWS OpsWorks

Answer: B *Explanation:* Auto Scaling automatically adds or removes EC2 instances according to conditions you define, matching capacity to demand.

8. Which service distributes incoming application traffic across multiple targets like EC2 instances? A) Amazon Route 53 B) Elastic Load Balancing C) AWS Global Accelerator D) Amazon CloudFront

Answer: B *Explanation:* Elastic Load Balancing automatically distributes incoming traffic across multiple targets to improve availability and fault tolerance.

9. Which service is designed for efficiently running batch computing jobs at any scale? A) AWS Batch B) AWS Lambda C) Amazon Lightsail D) Amazon ECS

Answer: A *Explanation:* AWS Batch dynamically provisions the optimal compute resources needed to run batch jobs based on volume and requirements.

10. Which pricing option lets you bid for unused EC2 capacity at a steep discount, with risk of interruption? A) Reserved Instances B) On-Demand Instances C) Spot Instances D) Savings Plans

Answer: C *Explanation:* Spot Instances let you use spare EC2 capacity at up to a 90% discount, but AWS can reclaim the capacity with short notice.

-e

Practice Exam - 5: Storage & Database

Services

1. Which service is AWS's object storage, ideal for storing files, backups, and static website content? A) Amazon EBS B) Amazon S3 C) Amazon EFS D) Amazon FSx

Answer: B *Explanation:* Amazon S3 is scalable object storage used for backups, static content, data lakes, and more.

2. Which storage class is best for data accessed rarely and retrievable within minutes, at low cost? A) S3 Standard B) S3 Glacier Instant Retrieval C) S3 Standard-IA D) S3 Intelligent-Tiering

Answer: B *Explanation:* S3 Glacier Instant Retrieval targets rarely accessed data that still needs fast (millisecond) retrieval, at very low cost.

3. Which storage is persistent block storage attached to a single EC2 instance? A) Amazon S3 B) Amazon EBS C) Amazon EFS D) AWS Storage Gateway

Answer: B *Explanation:* Amazon EBS provides durable block-level storage volumes for use with a single EC2 instance.

4. Which storage service provides a scalable file system that can be mounted by multiple EC2 instances concurrently? A) Amazon EBS B) Amazon EFS C) Amazon S3 D) Amazon Glacier

Answer: B *Explanation:* Amazon EFS is a fully managed elastic NFS file system that can be shared across many EC2 instances at once.

5. Which service is a fully managed NoSQL key-value and document database? A) Amazon RDS B) Amazon DynamoDB C) Amazon Redshift D) Amazon Aurora

Answer: B *Explanation:* DynamoDB is AWS's managed NoSQL database offering single-digit millisecond performance at any scale.

6. Which service is AWS's managed data warehouse for large-scale analytics? A) Amazon RDS B) Amazon Redshift C) Amazon DynamoDB D) Amazon ElastiCache

Answer: B *Explanation:* Redshift is a fully managed, petabyte-scale data warehouse service optimized for analytical queries.

7. Which relational database service is compatible with MySQL and PostgreSQL and built for the cloud with higher throughput? A) Amazon RDS (standard engines) B) Amazon Aurora C) Amazon DynamoDB D) Amazon Redshift

Answer: B *Explanation:* Aurora is a MySQL/PostgreSQL-compatible engine designed for the cloud, offering higher performance than standard RDS engines.

8. Which service provides an in-memory caching layer to speed up application performance? A) Amazon ElastiCache B) Amazon RDS C) Amazon EFS D) Amazon S3 Transfer Acceleration

Answer: A *Explanation:* ElastiCache provides fully managed in-memory data stores

(Redis/Memcached) to reduce latency for read-heavy workloads.

9. Which service helps migrate large datasets into AWS using physical, ruggedized devices? A) AWS DataSync B) AWS Snow Family C) AWS Storage Gateway D) AWS Transfer Family

Answer: B *Explanation:* The Snow Family (Snowcone, Snowball, Snowmobile) provides physical devices for offline transfer of large data volumes into AWS.

10. Which service bridges on-premises environments with AWS cloud storage for hybrid use cases? A) AWS Storage Gateway B) Amazon FSx C) AWS Snowball D) Amazon S3 Glacier

Answer: A *Explanation:* AWS Storage Gateway connects on-premises applications with AWS cloud storage, supporting hybrid cloud storage architectures.

-e

Practice Exam - 6: Networking & Content Delivery

1. Which service lets you provision a logically isolated virtual network for your AWS resources? A) Amazon VPC B) AWS Direct Connect C) Amazon Route 53 D) AWS Transit Gateway

Answer: A *Explanation:* Amazon VPC lets you define a virtual network, including IP ranges, subnets, route tables, and gateways.

2. Which service provides a dedicated private network connection between on-premises infrastructure and AWS? A) AWS Site-to-Site VPN B) AWS Direct Connect C) Amazon CloudFront D) AWS PrivateLink

Answer: B *Explanation:* Direct Connect establishes a dedicated private network link to AWS, bypassing the public internet for more consistent performance.

3. Which service is AWS's scalable Domain Name System (DNS) and domain registration service? A) Amazon Route 53 B) Amazon VPC C) AWS Direct Connect D) Amazon CloudFront

Answer: A *Explanation:* Route 53 provides highly available DNS routing as well as domain registration.

4. Which service is a global content delivery network (CDN) that caches content at edge locations? A) AWS Global Accelerator B) Amazon CloudFront C) Amazon Route 53 D) AWS Direct Connect

Answer: B *Explanation:* CloudFront caches content at edge locations worldwide to reduce latency for end users.

5. Which service connects multiple VPCs and on-premises networks through a central hub? A) AWS Transit Gateway B) AWS Direct Connect C) Amazon VPC Peering D) AWS PrivateLink

Answer: A *Explanation:* Transit Gateway acts as a central hub simplifying network connectivity between many VPCs and on-premises networks.

6. Which service improves availability and performance of applications with global users using AWS's global network? A) Amazon CloudFront B) AWS Global Accelerator C) Amazon Route 53 D) AWS Direct Connect

Answer: B *Explanation:* AWS Global Accelerator improves availability and performance by routing traffic through AWS's global network infrastructure.

7. Which VPC feature controls inbound and outbound traffic at the subnet level, and is stateless? A) Security Group B) Network ACL C) Route Table D) Internet Gateway

Answer: B *Explanation:* Network ACLs are stateless firewalls that operate at the subnet level, evaluating both inbound and outbound rules separately.

8. Which VPC feature acts as a stateful, instance-level virtual firewall? A) Security Group B) Network ACL C) NAT Gateway D) Internet Gateway

Answer: A *Explanation:* Security Groups are stateful firewalls attached to instances/ENIs; return traffic is automatically allowed.

9. Which gateway allows resources in a private subnet to access the internet for updates without being directly reachable from it? A) Internet Gateway B) NAT Gateway C) Virtual Private Gateway D) Transit Gateway

Answer: B *Explanation:* A NAT Gateway allows outbound internet access for private subnet resources while blocking unsolicited inbound connections.

10. Which service privately connects VPCs to supported AWS services without traversing the public internet? A) AWS PrivateLink B) AWS Direct Connect C) AWS Transit Gateway D) Amazon Route 53

Answer: A *Explanation:* AWS PrivateLink provides private connectivity between VPCs and AWS services, keeping traffic off the public internet.

-e

Practice Exam - 7: Billing, Pricing & Account Management

1. Which pricing model offers a discount for a 1- or 3-year commitment to EC2 capacity? A) On-Demand B) Spot Instances C) Reserved Instances D) Free Tier

Answer: C *Explanation:* Reserved Instances provide a significant discount versus On-Demand pricing in exchange for a term commitment.

2. Which pricing model is best for unpredictable, short-term workloads with no long-term commitment? A) Reserved Instances B) On-Demand Instances C) Dedicated Hosts D) Spot Instances

Answer: B *Explanation:* On-Demand lets you pay by the hour or second with no

upfront commitment, ideal for unpredictable workloads.

3. Which billing feature combines usage from multiple linked AWS accounts under one payer account for shared volume discounts? A) AWS Budgets B) Consolidated Billing C) AWS Cost Explorer D) Service Control Policies

Answer: B *Explanation:* Consolidated Billing, part of AWS Organizations, aggregates usage across accounts to unlock volume pricing tiers.

4. Which tool lets you set custom alerts when costs or usage approach a defined threshold? A) AWS Cost Explorer B) AWS Budgets C) AWS Pricing Calculator D) AWS Trusted Advisor

Answer: B *Explanation:* AWS Budgets lets you set custom cost/usage thresholds and receive alerts when they're exceeded or forecast to be.

5. Which tool helps visualize and analyze historical AWS cost and usage patterns? A) AWS Budgets B) AWS Cost Explorer C) AWS Pricing Calculator D) AWS Artifact

Answer: B *Explanation:* Cost Explorer provides visualizations and reports to understand and manage AWS spending over time.

6. Which tool estimates the cost of AWS services before you deploy them? A) AWS Cost Explorer B) AWS Pricing Calculator C) AWS Budgets D) AWS Trusted Advisor

Answer: B *Explanation:* The Pricing Calculator lets you model potential AWS architectures and estimate their cost before building anything.

7. Which AWS support plan is the free, entry-level plan with no technical support included? A) Basic B) Developer C) Business D) Enterprise

Answer: A *Explanation:* Basic support includes account/billing support, service health checks, and documentation, but no technical support.

8. Which support plan includes a designated Technical Account Manager (TAM)? A) Developer B) Business C) Enterprise D) Basic

Answer: C *Explanation:* A TAM, offering proactive guidance and advocacy, is included with the Enterprise support plan.

9. Which service centrally manages and governs multiple AWS accounts, including applying policies across them? A) AWS IAM B) AWS Organizations C) AWS Budgets D) AWS Config

Answer: B *Explanation:* AWS Organizations lets you centrally manage multiple accounts with consolidated billing and policy-based controls (SCPs).

10. Which free service scans your account and gives recommendations across cost optimization, performance, security, and fault tolerance? A) Amazon CloudWatch B) AWS Trusted Advisor C) AWS Config D) Amazon Inspector

Answer: B *Explanation:* Trusted Advisor inspects your AWS environment and provides real-time best-practice recommendations.

Practice Exam - 8: Global Infrastructure & Migration

1. Which best describes an AWS Region? A) A single data center B) A geographic area containing multiple isolated Availability Zones C) A single server rack D) A CDN edge location only

Answer: B *Explanation:* A Region is a geographic area with multiple, isolated Availability Zones that can be used together for high availability.

2. Which component consists of one or more discrete data centers with redundant power and networking within a Region? A) Edge Location B) Availability Zone C) Local Zone D) Wavelength Zone

Answer: B *Explanation:* An Availability Zone is made up of one or more discrete data centers, isolated from failures in other AZs in the Region.

3. Which infrastructure component places compute/storage closer to large population centers for low-latency applications? A) Availability Zone B) Local Zone C) Region D) Edge Location

Answer: B *Explanation:* AWS Local Zones place compute and storage closer to large population/industry centers to reduce latency for local users.

4. Which of the AWS Cloud Adoption Framework (CAF) perspectives focuses on aligning IT strategy with business goals? A) Technology perspective B) Business perspective C) Platform perspective D) Operations perspective

Answer: B *Explanation:* The Business perspective of the CAF ensures IT aligns with business needs and helps build a business case for cloud adoption.

5. Which migration strategy involves moving an application to the cloud with no code changes? A) Refactor B) Rehost (lift-and-shift) C) Replatform D) Repurchase

Answer: B *Explanation:* Rehosting, or 'lift-and-shift', moves an application to the cloud without changing its architecture or code.

6. Which migration strategy involves moving to a different product, such as a SaaS platform? A) Retire B) Repurchase C) Retain D) Rehost

Answer: B *Explanation:* Repurchasing means switching to a different product, often moving to a SaaS solution instead of maintaining the existing app.

7. Which migration strategy means keeping an application on-premises because it's not yet ready to migrate? A) Retain B) Refactor C) Rehost D) Relocate

Answer: A *Explanation:* Retain means keeping applications in the source environment, often because migrating them isn't currently a priority.

8. Which migration strategy involves re-architecting an application to take full advantage of cloud-native features? A) Rehost B) Replatform C) Refactor / Re-architect D) Retire

Answer: C *Explanation:* Refactoring/re-architecting means redesigning an application to use cloud-native features for scalability or performance.

9. What is one core purpose of the AWS Cloud Adoption Framework (CAF)? A) To sell AWS support contracts B) To help organizations develop an efficient cloud adoption plan C) To replace IAM D) To manage billing only

Answer: B *Explanation:* The CAF provides guidance and best practices to help organizations develop and execute an efficient cloud adoption strategy.

10. Which of these is an example of the 'Retire' migration strategy? A) Moving to a newer version of the same app B) Decommissioning an application no longer needed C) Rehosting with no changes D) Rewriting for microservices

Answer: B *Explanation:* Retire means identifying and decommissioning IT assets that are no longer useful once you understand your application portfolio.

-e

Practice Exam - 9: Application Integration & Monitoring

1. Which service is a managed pub/sub messaging service used to send notifications across multiple protocols? A) Amazon SQS B) Amazon SNS C) AWS Step Functions D) Amazon EventBridge

Answer: B *Explanation:* Amazon SNS is a fully managed pub/sub service used to fan out notifications via email, SMS, push, and more.

2. Which service is a managed message queue used to decouple microservices and distributed systems? A) Amazon SNS B) Amazon SQS C) AWS Glue D) Amazon MQ

Answer: B *Explanation:* Amazon SQS is a managed message queuing service that decouples and scales microservices and serverless applications.

3. Which service orchestrates multiple AWS services into serverless visual workflows? A) Amazon SWF B) AWS Step Functions C) Amazon EventBridge D) AWS Glue

Answer: B *Explanation:* AWS Step Functions lets you coordinate multiple AWS services into serverless workflows using visual state machines.

4. Which service routes events between AWS services, SaaS apps, and your own applications? A) Amazon SNS B) Amazon EventBridge C) Amazon SQS D) AWS Step Functions

Answer: B *Explanation:* Amazon EventBridge is a serverless event bus that connects

application data from your own apps, SaaS, and AWS services.

5. Which service collects metrics, logs, and sets alarms for AWS resources and applications? A) AWS CloudTrail B) Amazon CloudWatch C) AWS Config D) AWS X-Ray

Answer: B *Explanation:* CloudWatch is AWS's monitoring service, collecting metrics/logs and enabling alarms and dashboards.

6. Which service helps developers analyze and debug distributed applications, such as tracing requests across microservices? A) Amazon CloudWatch B) AWS X-Ray C) AWS Config D) Amazon Inspector

Answer: B *Explanation:* AWS X-Ray helps trace requests as they travel through distributed application components, aiding debugging and performance analysis.

7. Which service lets you define and provision AWS infrastructure using declarative templates (Infrastructure as Code)? A) AWS OpsWorks B) AWS CloudFormation C) AWS Config D) AWS Systems Manager

Answer: B *Explanation:* AWS CloudFormation lets you model, provision, and manage AWS resources using code-based templates.

8. Which service provides a unified interface to view operational data and automate common management tasks across AWS resources? A) AWS Systems Manager B) AWS Config C) Amazon CloudWatch D) AWS Trusted Advisor

Answer: A *Explanation:* AWS Systems Manager gives visibility and control over infrastructure, offering automation for operational tasks.

9. Which service extracts, transforms, and loads (ETL) data for analytics, typically between data stores? A) AWS Glue B) Amazon Athena C) Amazon QuickSight D) AWS Data Pipeline

Answer: A *Explanation:* AWS Glue is a fully managed ETL service that prepares and transforms data for analytics.

10. Which service lets you run SQL queries directly against data stored in S3 without managing infrastructure? A) Amazon Redshift B) Amazon Athena C) Amazon RDS D) AWS Glue

Answer: B *Explanation:* Amazon Athena is a serverless interactive query service that lets you analyze data in S3 using standard SQL.

-e

Practice Exam - 10: Mixed Final Review

1. Which AWS service is best for running code without provisioning or managing servers, paying only for compute time used? A) Amazon EC2 B) AWS Lambda C) Amazon Lightsail D) AWS Batch

Answer: B *Explanation:* AWS Lambda executes code in response to events with no server management, billed by compute time consumed.

2. Under the Shared Responsibility Model, which layer is always the customer's responsibility regardless of service used? A) Physical data center security B) Hypervisor patching C) Customer data and access management D) Network infrastructure hardware

Answer: C *Explanation:* Customers are always responsible for their own data, IAM configuration, and access management, regardless of the AWS service used.

3. Which AWS service class fits data that must be retained for years but is almost never accessed, at lowest possible cost? A) S3 Standard B) S3 Glacier Deep Archive C) S3 Standard-IA D) S3 Intelligent-Tiering

Answer: B *Explanation:* S3 Glacier Deep Archive is the lowest-cost storage class, designed for long-term retention of rarely accessed data (retrieval in hours).

4. Which service would best help a startup forecast and control monthly AWS spend as usage grows? A) AWS Budgets B) AWS Direct Connect C) Amazon GuardDuty D) AWS Snowball

Answer: A *Explanation:* AWS Budgets lets you set thresholds and receive proactive alerts as spending approaches or exceeds your defined budget.

5. A company needs a private, dedicated, high-bandwidth network connection from its data center to AWS. Which service fits? A) AWS Site-to-Site VPN B) AWS Direct Connect C) Amazon CloudFront D) AWS Transit Gateway

Answer: B *Explanation:* AWS Direct Connect establishes a dedicated private network connection, offering more consistent bandwidth than internet-based VPN.

6. Which AWS service would detect that an S3 bucket was accidentally made public and contains sensitive data? A) AWS Config + Amazon Macie B) Amazon Route 53 C) AWS Direct Connect D) Amazon Lightsail

Answer: A *Explanation:* AWS Config can flag non-compliant bucket configurations while Macie identifies sensitive data exposure, together addressing this risk.

7. Which certification level is the AWS Certified Cloud Practitioner considered? A) Professional B) Specialty C) Foundational D) Associate

Answer: C *Explanation:* Cloud Practitioner is AWS's foundational-level certification for those new to AWS Cloud concepts and services.

8. Which of the following would reduce compute costs for a fault-tolerant batch job that can handle interruptions? A) On-Demand Instances B) Reserved Instances C) Spot Instances D) Dedicated Hosts

Answer: C *Explanation:* Spot Instances offer steep discounts on spare capacity, suited for flexible, interruption-tolerant workloads like batch processing.

9. Which service would you use to keep a static website's content cached close to users worldwide? A) Amazon Route 53 B) Amazon CloudFront C) AWS Direct Connect D) AWS Transit Gateway

Answer: B *Explanation:* CloudFront caches content at edge locations globally, reducing latency for users accessing static or dynamic content.

10. A company wants centralized billing and policy enforcement across 10 AWS accounts used by different teams. Which service fits best? A) AWS IAM B) AWS Organizations C) Amazon Cognito D) AWS Config

Answer: B *Explanation:* AWS Organizations enables consolidated billing and centralized policy management (via SCPs) across multiple AWS accounts.

-e

Full-Length Mock Exam — 65 Questions

This simulates the real AWS Certified Cloud Practitioner (CLF-C02) exam format and length (65 questions), proportionally weighted across all four exam domains. Time yourself to 90 minutes for a realistic run.

1. Which is a key benefit of cloud computing regarding capital expense? A) Eliminates all IT costs B) Trades capital expense for variable expense C) Guarantees lower total spend D) Removes the need for budgeting

Answer: B *Explanation:* Cloud computing lets you trade upfront capital expense (data centers, hardware) for variable expense that scales with actual usage.

2. Which AWS pillar of the Well-Architected Framework focuses on the ability to recover from failures? A) Security B) Reliability C) Cost Optimization D) Performance Efficiency

Answer: B *Explanation:* Reliability covers a workload's ability to perform its function correctly and recover quickly from disruptions.

3. What does 'elasticity' mean in cloud computing? A) Fixed capacity regardless of demand B) Automatically scaling resources up or down to match demand C) Manually adding servers only D) Permanent over-provisioning

Answer: B *Explanation:* Elasticity is the ability to automatically scale compute resources up or down as demand changes.

4. Which of the following best describes 'economies of scale' in AWS pricing? A) Prices increase as more customers use AWS B) AWS passes on cost savings from large scale operations to customers C) Only enterprise customers get discounts D) Prices are fixed regardless of usage

Answer: B *Explanation:* Because AWS aggregates usage from many customers, it can lower costs and pass savings on to all customers.

5. Which deployment model runs entirely on AWS with no on-premises component? A) Hybrid cloud B) On-premises C) All-in cloud D) Private cloud

Answer: C *Explanation:* An all-in cloud deployment runs applications entirely in the

cloud, migrating existing apps or building new ones natively.

6. What is a key characteristic of 'high availability' in AWS architecture? A) Running in a single Availability Zone B) Minimizing downtime through redundancy across AZs C) Reducing costs by using one server D) Manual failover only

Answer: B *Explanation:* High availability is achieved by architecting workloads with redundancy, often distributed across multiple Availability Zones.

7. Which term describes AWS's practice of only charging for resources actually consumed? A) Reserved pricing B) Pay-as-you-go C) Fixed billing D) Flat-rate subscription

Answer: B *Explanation:* Pay-as-you-go means customers pay only for the individual services they use, for as long as they use them, with no long-term contracts.

8. What is the primary purpose of the AWS Well-Architected Tool? A) To automatically fix security issues B) To review workloads against best practices across the six pillars C) To provision new EC2 instances D) To manage IAM users

Answer: B *Explanation:* The Well-Architected Tool helps review workloads against current AWS best practices and provides improvement guidance.

9. Which advantage of cloud computing refers to deploying applications globally within minutes? A) Increased speed and agility B) Go global in minutes C) Stop guessing capacity D) Trade capital expense

Answer: B *Explanation:* AWS's global infrastructure lets you deploy applications in multiple Regions worldwide within minutes.

10. Which of the following is NOT one of the AWS Well-Architected Framework's six pillars? A) Operational Excellence B) Sustainability C) Scalability D) Cost Optimization

Answer: C *Explanation:* The six pillars are Operational Excellence, Security, Reliability, Performance Efficiency, Cost Optimization, and Sustainability — 'Scalability' is not a named pillar.

11. Which best describes an AWS Region? A) A single data center B) A geographic area containing multiple isolated Availability Zones C) A single server rack D) A CDN edge location only

Answer: B *Explanation:* A Region is a geographic area with multiple, isolated Availability Zones that can be used together for high availability.

12. Which component consists of one or more discrete data centers with redundant power and networking within a Region? A) Edge Location B) Availability Zone C) Local Zone D) Wavelength Zone

Answer: B *Explanation:* An Availability Zone is made up of one or more discrete data centers, isolated from failures in other AZs in the Region.

13. Which infrastructure component places compute/storage closer to large population centers for low-latency applications? A) Availability Zone B) Local Zone C) Region D) Edge Location

Answer: B *Explanation:* AWS Local Zones place compute and storage closer to large population/industry centers to reduce latency for local users.

14. Which of the AWS Cloud Adoption Framework (CAF) perspectives focuses on aligning IT strategy with business goals? A) Technology perspective B) Business perspective C) Platform perspective D) Operations perspective

Answer: B *Explanation:* The Business perspective of the CAF ensures IT aligns with business needs and helps build a business case for cloud adoption.

15. Which migration strategy involves moving an application to the cloud with no code changes? A) Refactor B) Rehost (lift-and-shift) C) Replatform D) Repurchase

Answer: B *Explanation:* Rehosting, or 'lift-and-shift', moves an application to the cloud without changing its architecture or code.

16. Which migration strategy involves moving to a different product, such as a SaaS platform? A) Retire B) Repurchase C) Retain D) Rehost

Answer: B *Explanation:* Repurchasing means switching to a different product, often moving to a SaaS solution instead of maintaining the existing app.

17. Under the Shared Responsibility Model, who is responsible for patching the guest operating system on EC2? A) AWS B) The customer C) AWS Support D) A third party

Answer: B *Explanation:* Customers are responsible for security 'in' the cloud, including guest OS patches, application software, and data configuration.

18. Which IAM feature groups permissions and can be attached to multiple users? A) IAM Role B) IAM Policy C) IAM Group D) IAM User

Answer: C *Explanation:* IAM Groups let you attach a set of permissions to multiple users at once for easier management.

19. What is the best practice for the AWS account root user? A) Use it for daily tasks B) Enable MFA and avoid using it for everyday tasks C) Share credentials with the whole team D) Disable MFA for convenience

Answer: B *Explanation:* AWS recommends enabling MFA on the root user and using IAM users/roles for day-to-day account access instead.

20. Which IAM entity is best suited for granting temporary access to an application running on EC2? A) IAM User with access keys B) IAM Role C) IAM Group D) Root account credentials

Answer: B *Explanation:* IAM Roles provide temporary security credentials, which are safer than long-term access keys for applications.

21. What does the principle of least privilege mean in AWS security? A) Granting full admin access to all users B) Granting only the permissions needed to perform a task C) Disabling all permissions by default D) Granting access based on seniority

Answer: B *Explanation:* Least privilege means granting only the minimum

permissions necessary to perform a required task.

22. Which AWS service centrally manages access and permissions across multiple AWS accounts? A) AWS IAM B) AWS Organizations with SCPs C) Amazon Cognito D) AWS Directory Service

Answer: B *Explanation:* AWS Organizations, combined with Service Control Policies (SCPs), lets you centrally manage permissions across multiple accounts.

23. Which service manages user sign-up, sign-in, and access control for web and mobile apps? A) AWS IAM B) Amazon Cognito C) AWS Directory Service D) AWS SSO

Answer: B *Explanation:* Amazon Cognito provides authentication, authorization, and user management for web and mobile applications.

24. Which of these is considered a security best practice for IAM credentials? A) Rotate access keys regularly B) Embed credentials directly in code C) Share one IAM user among a team D) Never use MFA

Answer: A *Explanation:* Regularly rotating IAM access keys reduces the risk if credentials are ever compromised.

25. What is AWS Single Sign-On (now IAM Identity Center) primarily used for? A) Encrypting S3 buckets B) Centralized access management across multiple AWS accounts and business applications C) Load balancing traffic D) Monitoring API calls

Answer: B *Explanation:* IAM Identity Center (formerly AWS SSO) provides centralized access management to multiple AWS accounts and SaaS applications.

26. Which AWS service is responsible for physical security of data centers under the Shared Responsibility Model? A) The customer B) AWS C) A third-party auditor D) Neither party

Answer: B *Explanation:* AWS is responsible for the security 'of' the cloud, including physical security of the data centers hosting infrastructure.

27. Which service discovers and helps protect sensitive data such as PII stored in S3? A) Amazon GuardDuty B) Amazon Macie C) AWS Shield D) Amazon Inspector

Answer: B *Explanation:* Macie uses machine learning to automatically discover, classify, and protect sensitive data like PII.

28. Which service provides continuous threat detection across AWS accounts and workloads? A) Amazon Macie B) Amazon GuardDuty C) AWS Config D) AWS Artifact

Answer: B *Explanation:* GuardDuty continuously monitors for malicious activity and unauthorized behavior using threat intelligence and machine learning.

29. Which service filters malicious web traffic such as SQL injection and cross-site scripting? A) AWS Shield B) AWS WAF C) AWS Firewall Manager D) Amazon Inspector

Answer: B *Explanation:* AWS WAF is a web application firewall protecting against common web exploits like SQL injection and XSS.

30. Which service provides protection specifically against DDoS attacks? A) AWS WAF B) AWS Shield C) AWS Macie D) Amazon GuardDuty

Answer: B *Explanation:* AWS Shield provides managed protection against Distributed Denial of Service (DDoS) attacks.

31. Which service gives on-demand access to AWS's compliance reports and agreements (e.g., ISO, PCI)? A) AWS Artifact B) AWS Config C) AWS Audit Manager D) AWS Trusted Advisor

Answer: A *Explanation:* AWS Artifact is a self-service portal providing on-demand access to AWS's compliance documentation.

32. Which service helps continuously assess AWS usage against compliance frameworks and prepares audit reports? A) AWS Artifact B) AWS Audit Manager C) Amazon Inspector D) AWS Config

Answer: B *Explanation:* AWS Audit Manager automates evidence collection to simplify risk assessment and audit readiness.

33. Which service scans EC2 instances and container images for known software vulnerabilities? A) Amazon GuardDuty B) Amazon Inspector C) AWS Macie D) AWS Config

Answer: B *Explanation:* Amazon Inspector automatically scans workloads for software vulnerabilities and unintended network exposure.

34. Which service records configuration changes to AWS resources and evaluates them against desired rules? A) AWS CloudTrail B) AWS Config C) Amazon CloudWatch D) AWS Systems Manager

Answer: B *Explanation:* AWS Config tracks resource configuration changes over time and can check them against compliance rules.

35. Which service logs API calls made within an AWS account for governance and auditing? A) AWS Config B) AWS CloudTrail C) Amazon CloudWatch D) AWS X-Ray

Answer: B *Explanation:* CloudTrail records API activity across an account, supporting governance, compliance, and operational auditing.

36. What kind of encryption does AWS Key Management Service (KMS) primarily help manage? A) Network firewall rules B) Encryption keys for data protection C) IAM group permissions D) DNS records

Answer: B *Explanation:* AWS KMS lets you create and control encryption keys used to protect data across AWS services.

37. Which service lets you run virtual servers with full control over the OS? A) AWS Lambda B) Amazon EC2 C) Amazon Lightsail D) AWS Fargate

Answer: B *Explanation:* Amazon EC2 provides resizable virtual servers (instances) where you manage the OS and installed software.

38. Which service runs code in response to events without provisioning or managing servers? A) Amazon EC2 B) AWS Lambda C) Amazon Lightsail D) Amazon ECS on EC2

Answer: B *Explanation:* AWS Lambda executes code in response to triggers/events and you pay only for compute time consumed.

39. Which service offers simplified virtual private servers with pre-configured bundles, good for simple websites? A) Amazon EC2 B) Amazon Lightsail C) AWS Batch D) Amazon ECS

Answer: B *Explanation:* Lightsail provides easy-to-launch virtual servers with bundled compute, storage, and networking for simple applications.

40. Which container orchestration service is AWS-native (not Kubernetes-based)? A) Amazon EKS B) Amazon ECS C) AWS Batch D) AWS Outposts

Answer: B *Explanation:* Amazon ECS is AWS's own container orchestration service, distinct from the Kubernetes-based EKS.

41. Which service provides a managed Kubernetes control plane? A) Amazon ECS B) Amazon EKS C) AWS Fargate D) AWS App Runner

Answer: B *Explanation:* Amazon EKS runs Kubernetes control plane management for you, so you don't have to install/operate it yourself.

42. Which serverless compute engine works with both ECS and EKS to remove server management? A) AWS Fargate B) Amazon Lightsail C) AWS Batch D) Amazon EC2

Answer: A *Explanation:* AWS Fargate is a serverless compute engine for containers, usable with both ECS and EKS.

43. Which service automatically adjusts EC2 capacity up or down based on demand? A) Elastic Load Balancing B) Auto Scaling C) Amazon CloudWatch D) AWS OpsWorks

Answer: B *Explanation:* Auto Scaling automatically adds or removes EC2 instances according to conditions you define, matching capacity to demand.

44. Which service distributes incoming application traffic across multiple targets like EC2 instances? A) Amazon Route 53 B) Elastic Load Balancing C) AWS Global Accelerator D) Amazon CloudFront

Answer: B *Explanation:* Elastic Load Balancing automatically distributes incoming traffic across multiple targets to improve availability and fault tolerance.

45. Which service is designed for efficiently running batch computing jobs at any scale? A) AWS Batch B) AWS Lambda C) Amazon Lightsail D) Amazon ECS

Answer: A *Explanation:* AWS Batch dynamically provisions the optimal compute resources needed to run batch jobs based on volume and requirements.

46. Which pricing option lets you bid for unused EC2 capacity at a steep discount, with risk of interruption? A) Reserved Instances B) On-Demand Instances C) Spot Instances D) Savings Plans

Answer: C *Explanation:* Spot Instances let you use spare EC2 capacity at up to a 90% discount, but AWS can reclaim the capacity with short notice.

47. Which service is AWS's object storage, ideal for storing files, backups, and static website content? A) Amazon EBS B) Amazon S3 C) Amazon EFS D) Amazon FSx

Answer: B *Explanation:* Amazon S3 is scalable object storage used for backups, static content, data lakes, and more.

48. Which storage class is best for data accessed rarely and retrievable within minutes, at low cost? A) S3 Standard B) S3 Glacier Instant Retrieval C) S3 Standard-IA D) S3 Intelligent-Tiering

Answer: B *Explanation:* S3 Glacier Instant Retrieval targets rarely accessed data that still needs fast (millisecond) retrieval, at very low cost.

49. Which storage is persistent block storage attached to a single EC2 instance? A) Amazon S3 B) Amazon EBS C) Amazon EFS D) AWS Storage Gateway

Answer: B *Explanation:* Amazon EBS provides durable block-level storage volumes for use with a single EC2 instance.

50. Which storage service provides a scalable file system that can be mounted by multiple EC2 instances concurrently? A) Amazon EBS B) Amazon EFS C) Amazon S3 D) Amazon Glacier

Answer: B *Explanation:* Amazon EFS is a fully managed elastic NFS file system that can be shared across many EC2 instances at once.

51. Which service is a fully managed NoSQL key-value and document database? A) Amazon RDS B) Amazon DynamoDB C) Amazon Redshift D) Amazon Aurora

Answer: B *Explanation:* DynamoDB is AWS's managed NoSQL database offering single-digit millisecond performance at any scale.

52. Which service is AWS's managed data warehouse for large-scale analytics? A) Amazon RDS B) Amazon Redshift C) Amazon DynamoDB D) Amazon ElastiCache

Answer: B *Explanation:* Redshift is a fully managed, petabyte-scale data warehouse service optimized for analytical queries.

53. Which relational database service is compatible with MySQL and PostgreSQL and built for the cloud with higher throughput? A) Amazon RDS (standard engines) B) Amazon Aurora C) Amazon DynamoDB D) Amazon Redshift

Answer: B *Explanation:* Aurora is a MySQL/PostgreSQL-compatible engine designed for the cloud, offering higher performance than standard RDS engines.

54. Which service provides an in-memory caching layer to speed up application performance? A) Amazon ElastiCache B) Amazon RDS C) Amazon EFS D) Amazon S3 Transfer Acceleration

Answer: A *Explanation:* ElastiCache provides fully managed in-memory data stores

(Redis/Memcached) to reduce latency for read-heavy workloads.

55. Which service helps migrate large datasets into AWS using physical, ruggedized devices? A) AWS DataSync B) AWS Snow Family C) AWS Storage Gateway D) AWS Transfer Family

Answer: B *Explanation:* The Snow Family (Snowcone, Snowball, Snowmobile) provides physical devices for offline transfer of large data volumes into AWS.

56. Which service bridges on-premises environments with AWS cloud storage for hybrid use cases? A) AWS Storage Gateway B) Amazon FSx C) AWS Snowball D) Amazon S3 Glacier

Answer: A *Explanation:* AWS Storage Gateway connects on-premises applications with AWS cloud storage, supporting hybrid cloud storage architectures.

57. Which service lets you provision a logically isolated virtual network for your AWS resources? A) Amazon VPC B) AWS Direct Connect C) Amazon Route 53 D) AWS Transit Gateway

Answer: A *Explanation:* Amazon VPC lets you define a virtual network, including IP ranges, subnets, route tables, and gateways.

58. Which pricing model offers a discount for a 1- or 3-year commitment to EC2 capacity? A) On-Demand B) Spot Instances C) Reserved Instances D) Free Tier

Answer: C *Explanation:* Reserved Instances provide a significant discount versus On-Demand pricing in exchange for a term commitment.

59. Which pricing model is best for unpredictable, short-term workloads with no long-term commitment? A) Reserved Instances B) On-Demand Instances C) Dedicated Hosts D) Spot Instances

Answer: B *Explanation:* On-Demand lets you pay by the hour or second with no upfront commitment, ideal for unpredictable workloads.

60. Which billing feature combines usage from multiple linked AWS accounts under one payer account for shared volume discounts? A) AWS Budgets B) Consolidated Billing C) AWS Cost Explorer D) Service Control Policies

Answer: B *Explanation:* Consolidated Billing, part of AWS Organizations, aggregates usage across accounts to unlock volume pricing tiers.

61. Which tool lets you set custom alerts when costs or usage approach a defined threshold? A) AWS Cost Explorer B) AWS Budgets C) AWS Pricing Calculator D) AWS Trusted Advisor

Answer: B *Explanation:* AWS Budgets lets you set custom cost/usage thresholds and receive alerts when they're exceeded or forecast to be.

62. Which tool helps visualize and analyze historical AWS cost and usage patterns? A) AWS Budgets B) AWS Cost Explorer C) AWS Pricing Calculator D) AWS Artifact

Answer: B *Explanation:* Cost Explorer provides visualizations and reports to understand and manage AWS spending over time.

63. Which tool estimates the cost of AWS services before you deploy them? A) AWS Cost Explorer B) AWS Pricing Calculator C) AWS Budgets D) AWS Trusted Advisor

Answer: B *Explanation:* The Pricing Calculator lets you model potential AWS architectures and estimate their cost before building anything.

64. Which AWS support plan is the free, entry-level plan with no technical support included? A) Basic B) Developer C) Business D) Enterprise

Answer: A *Explanation:* Basic support includes account/billing support, service health checks, and documentation, but no technical support.

65. Which support plan includes a designated Technical Account Manager (TAM)? A) Developer B) Business C) Enterprise D) Basic

Answer: C *Explanation:* A TAM, offering proactive guidance and advocacy, is included with the Enterprise support plan.
